

Mehmet Nasim Yilmaz

Full-Stack Developer

Gaziosmanpasa, Turkey | +90-544-173-48-73 | mehmetnasim42@gmail.com | linkedin/in/menasy | github/menasy | menasy.me

EXPERIENCE

Baykar Technologies - Central Control Software Intern	October 2025 – December 2025
- Developed and integrated a live streaming platform managing broadcast workflows across 3 protocols: WebRTC, HLS, and MPEG-DASH. Technologies: ASP.NET Core, React, Web API, Wowza Streaming Engine, PostgreSQL, Docker, SignalR, RBAC, Grafana, Loki, Serilog	
Paka Technologies - System Support Intern	August 2024 - September 2024
- Resolved computer hardware and software issues by managing an average of 50+ weekly IT support tickets. Technologies: System Administration, IT Infrastructure, Technical Support, Troubleshooting.	
Tencent Holdings Limited - Server Technician	April 2023 - May 2023
- Performed data center server installations, rack cabinet assembly, and network cabling as part of a 3-person team. Technologies: Server Installation, Data Center Operations, Hardware Assembly, Network Configuration.	

PROJECTS

eSIMbag - Digital eSIM Purchasing Platform - esimbag.com
- A multilingual global B2C platform enabling users to purchase regional data packages and global eSIM profiles. Technologies: Next.js, TypeScript, TanStack Query, Zustand, Stripe, Tailwind CSS, Turborepo, i18n.
StreamApp - Live Streaming and Media Management Platform
- Developed a platform that processes and archives live streams, achieving low-latency delivery (WebRTC: ~0.1s, DASH: ~7.4s, etc.). Technologies: .NET, React, Wowza Streaming Engine, RBAC, SignalR, WebRTC, HLS, MPEG-DASH, PostgreSQL, Docker.
KobiAI - AI-Based Business Management System - Github
- An operations platform that manages product, order, inventory, and customer processes for SMEs with AI support. Technologies: Python, FastAPI, PostgreSQL, Redis, Google Gemini, Next.js, TypeScript, Zustand, SSE, Docker Compose.
ft_transcendence - Real-Time Gaming Platform - Github
- A real-time gaming, tournament, and social interaction platform built using a 5-service microservices architecture. Technologies: TypeScript, Fastify, WebSocket, Web Components, Nginx, Docker, Microservices, i18n, OAuth 2.0.
WebServ - HTTP/1.1 Web Server - Github
- A CGI-supported server built from scratch using an event-driven, non-blocking architecture to handle concurrent network connections. Technologies: C++, Socket Programming, I/O Multiplexing (poll/select), CGI, POSIX API.
Inception - Microservices Infrastructure Management - Github
- Securely configured a 3-service Docker Compose infrastructure consisting of Nginx, WordPress, and MariaDB. Technologies: Docker, Docker Compose, Nginx, MariaDB, WordPress, Bash Script, TLS/SSL, Alpine Linux.
Smart Guide - Accessibility-Focused Mobile Application - Github - Play Store
- Developed and published a mobile guide application on Google Play, featuring 3-language support, voice commands, and a large interface. Technologies: React Native, Expo, TypeScript, MMKV, Fuse.js, Speech Recognition, Contacts API, i18n.

EDUCATION

42 Turkiye - Istanbul - Software Development	October 2023 – January 2026
- In a project-based, peer-learning, instructor-free software development education model, developed 15+ projects end-to-end under conditions equivalent to a real work environment. Researched and solved complex problems, underwent continuous peer code reviews, and gained professional software development experience by running collaborative development workflows in teams of 3-5. Technologies: C, C++, TypeScript, Full-Stack Development, Socket Programming, Multi-threading, Microservices, Docker, DevOps, Git, OOP	
Istanbul Gelisim University - Management Information Systems	October 2021 – July 2025
- Completed a 4-year bachelor's degree as second in class with a 3.47/4.00 GPA; developed projects with a technical and strategic perspective in data mining, machine learning, and business intelligence within an interdisciplinary curriculum. Technologies: Python, SQL, Data Visualization, HTML, REST API, Front-End Development, Tailwind CSS, Data Mining, Machine Learning	
AI & Technology Academy – Artificial Intelligence Module	January 2026 – September 2026
- Worked on project-based AI application development throughout a 9-month intensive training program; developed generative AI-based systems, designed multi-step agent architectures, and gained a development discipline closely aligned with real product logic. Technologies: FastAPI, LLM, Generative AI, LangChain, CrewAI, AI Agents, ReAct Agents, Local LLMs, RAG, Web Agent Integration	

SKILLS

Languages
English: Intermediate (B1) – Turkish: Native
Technical Skills
Programming Languages: C, TypeScript, JavaScript, C#, C++, Java, Kotlin, SQL, Python. Backend Teknolojileri: ASP.NET Core, Node.js, .NET Web API, Fastify, REST API, Entity Framework Core, JWT Authentication/Authorization, WebSocket, OAuth 2.0, RBAC, SignalR, FastAPI. Frontend Teknolojileri: React, Next.js, Tailwind CSS, SSR, i18n, TanStack Query, Zustand, Redux. Mobil Teknolojiler: React Native, Expo, Android SDK, Android Jetpack, Room Database. Veritabanları: PostgreSQL, SQLite, Redis, Firebase, Supabase, Cloud Firestore. DevOps, Infrastructure and Log Management: Docker, Docker Compose, Nginx, CI/CD, Linux, TLS/SSL, Grafana, Loki, Alloy, Serilog, ELK Stack. Systems and Network Programming: Socket Programming, Multi-threading, Multi-process, HTTP/1.1, TCP/IP. Software Architecture and Principles: Microservices, MVC, Onion Architecture, OOP, Clean Code.
Tools and Platforms: Git, GitHub, Postman, Visual Studio Code, Android Studio, Antigravity IDE.
